

A unique tool to create & manage a network of observers on the web

What is BIOAPP?

BIOAPP is a WEB application designed for institutions, researchers, collectivities or individuals who :

- Need to collect data for one or many species;
- Want to educate people about one or many species;
- Want to facilitate communication between people sharing a common interest for one or many species.

All this in a stimulating environment where members can easily add detailed observations, share knowledge and insights and learn from a rich and dynamic content.

From the user perspective

A very user-friendly form for adding observations where data is validated as it is entered.

Offers a learning opportunity via an easy access to the data and rich content including text, photos, videos, maps, charts and more, all collated and presented in meaningful ways.

Possibility to subscribe to email notifications, notably when new observations are added for specific species.

A place to communicate with other people sharing common interests.

Set-up and maintenance

Easy to setup with little or no html knowledge.

It can integrate the graphical appearance and content of a preowned website.

It gives you total control over who can do what within the site.

A complete assortment of tools for :

- Content creation & management;
- Facilitating collaboration & communication;
- Promotion and auto-financing of your project.

Adaptiveness

Multiple language support :

- Site can be either in English, in French or both;
- When switching language, you stay on the same page;
- Automatic language redirection.

Different projects, different needs :

- Species categories, environment, conditions will reflect your project needs;
- Feature just one species or as many as you like;
- Access restrictions.

Graphical appearance :

- Integrates into your current website;
- Reuse preowned website content and graphical components.

Specific content :

- Easily create new pages right from the administration zone;
- Upload photos and other files and integrate them to your pages.

System requirement

Standard Linux web hosting server with php5 and MySQL support.

The BIOAPP is developed
and maintained by
Les Productions un Monde à Part inc.
