University of Hong Kong

Behavioural Flexibility

Behavioural Flexibility

- Enhances invasion success
 - Exploit novel resources

Behavioural Flexibility

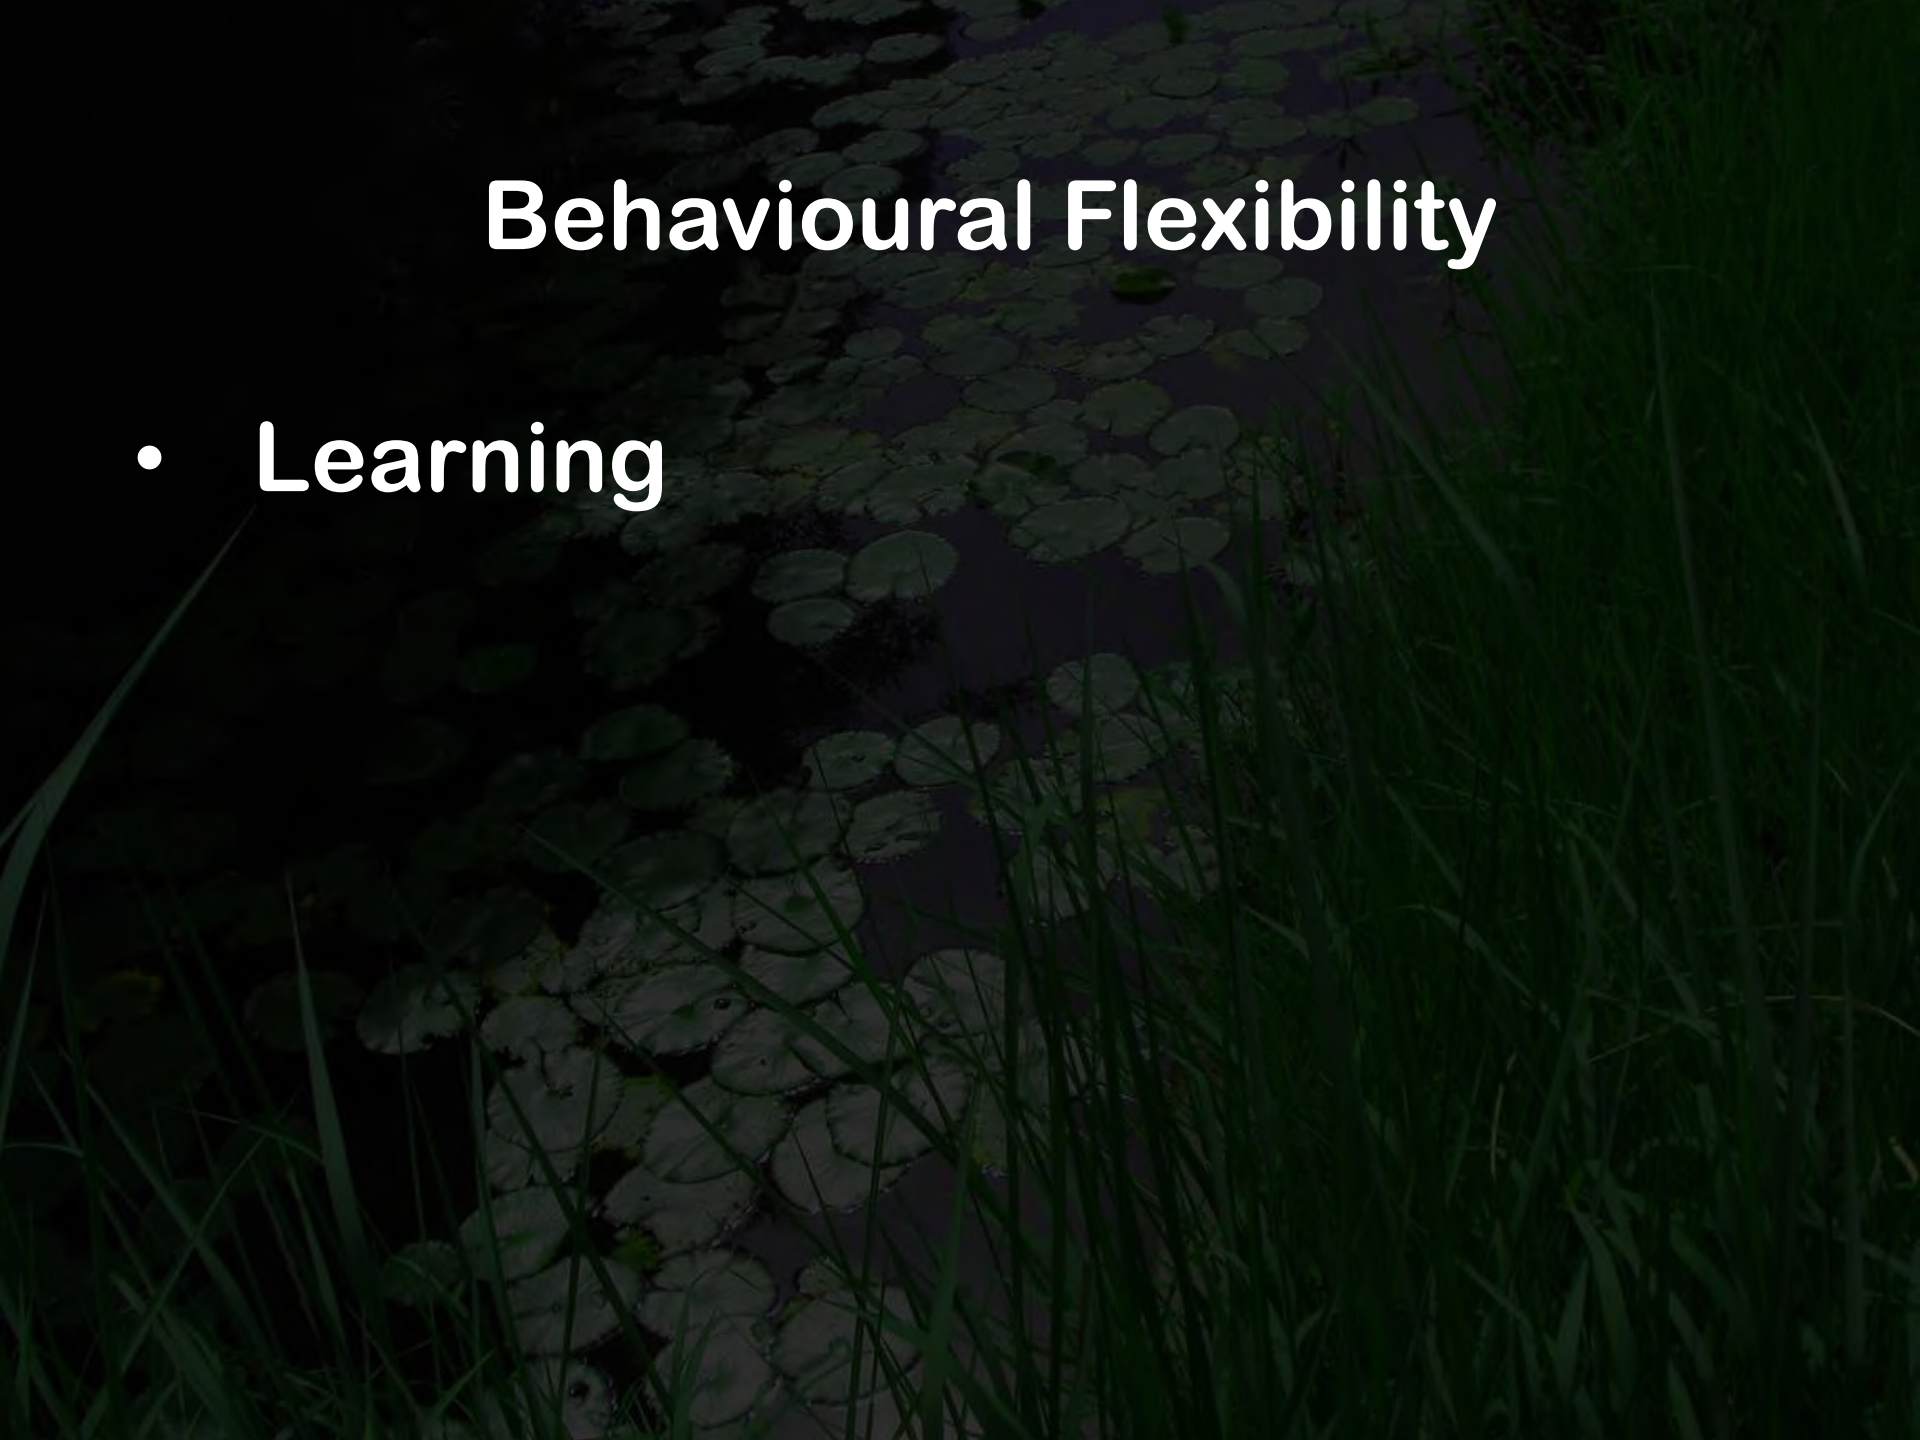

- Enhances invasion success
 - Exploit novel resources
- Ideal first response to change
 - Rapid adjustment

Behavioural Flexibility

- Enhances invasion success
 - Exploit novel resources
- Ideal first response to change
 - Rapid adjustment
- Many behaviours
 - e.g. aggression, competition, foraging, reproductive, parental care

Behavioural Flexibility

- Learning

Behavioural Flexibility

- Learning
 - Fine tune existing behaviours
 - New behaviours - Innovation

Behavioural Flexibility

- Learning
 - Fine tune existing behaviours
 - New behaviours - Innovation

Carcinus maenas

Cherax albidus

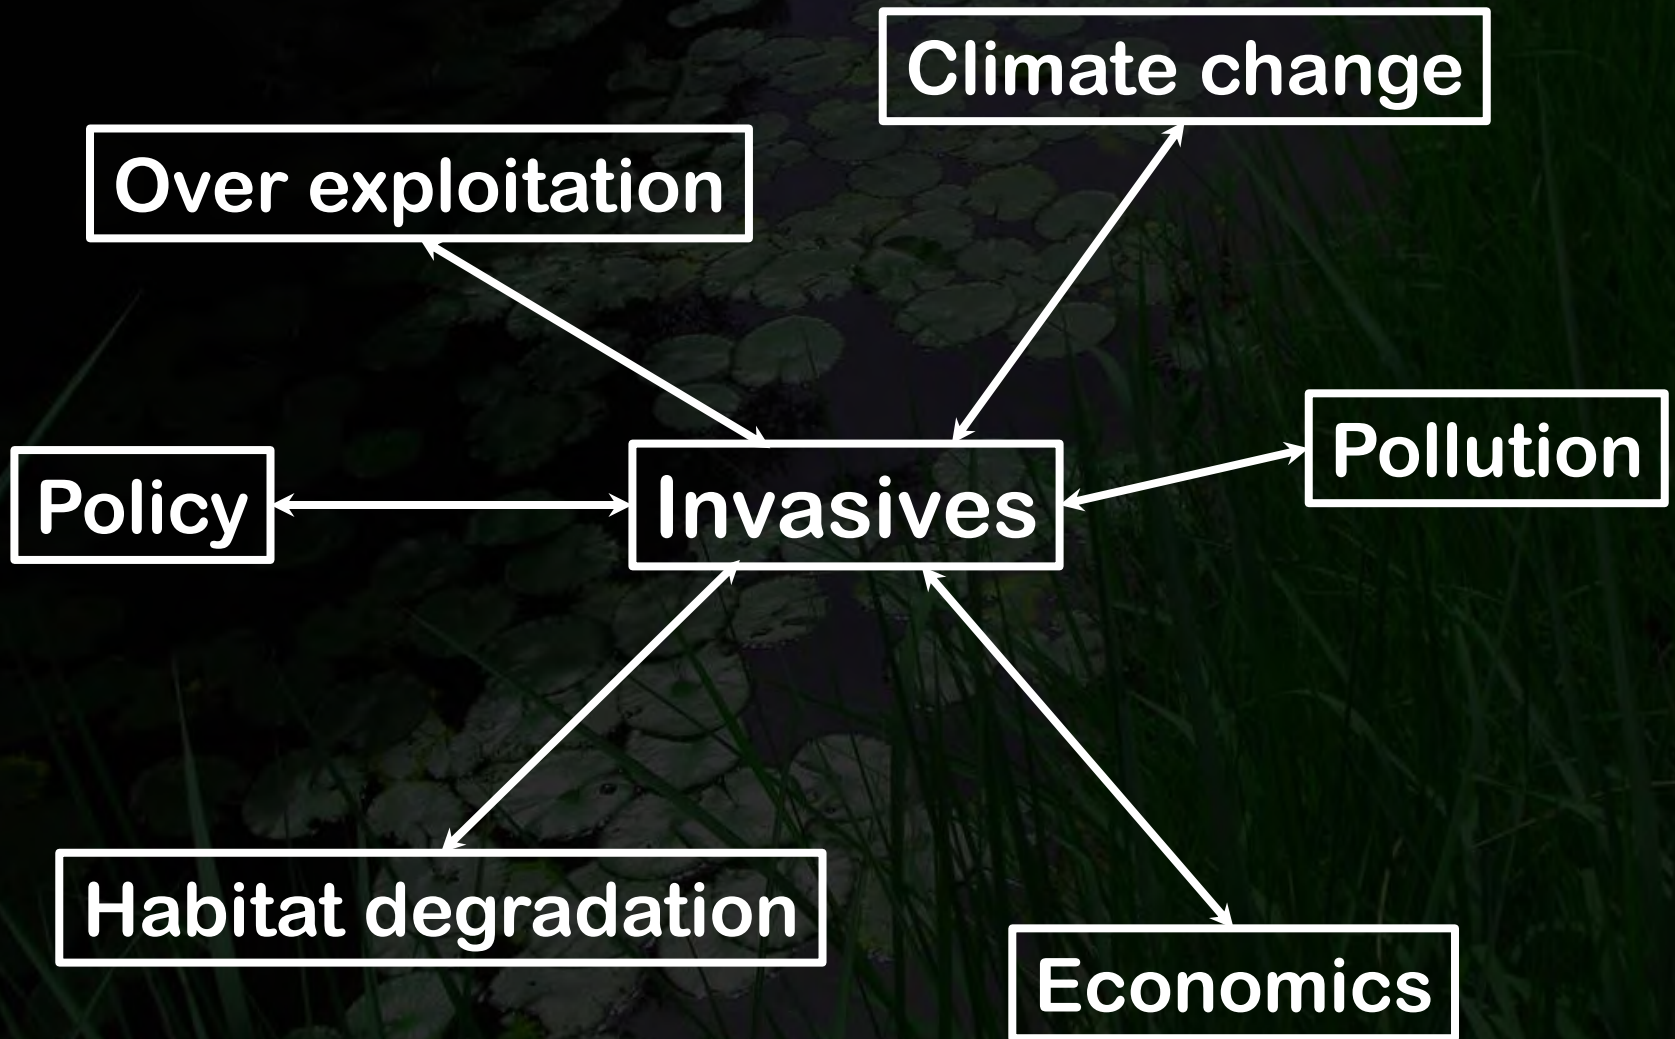

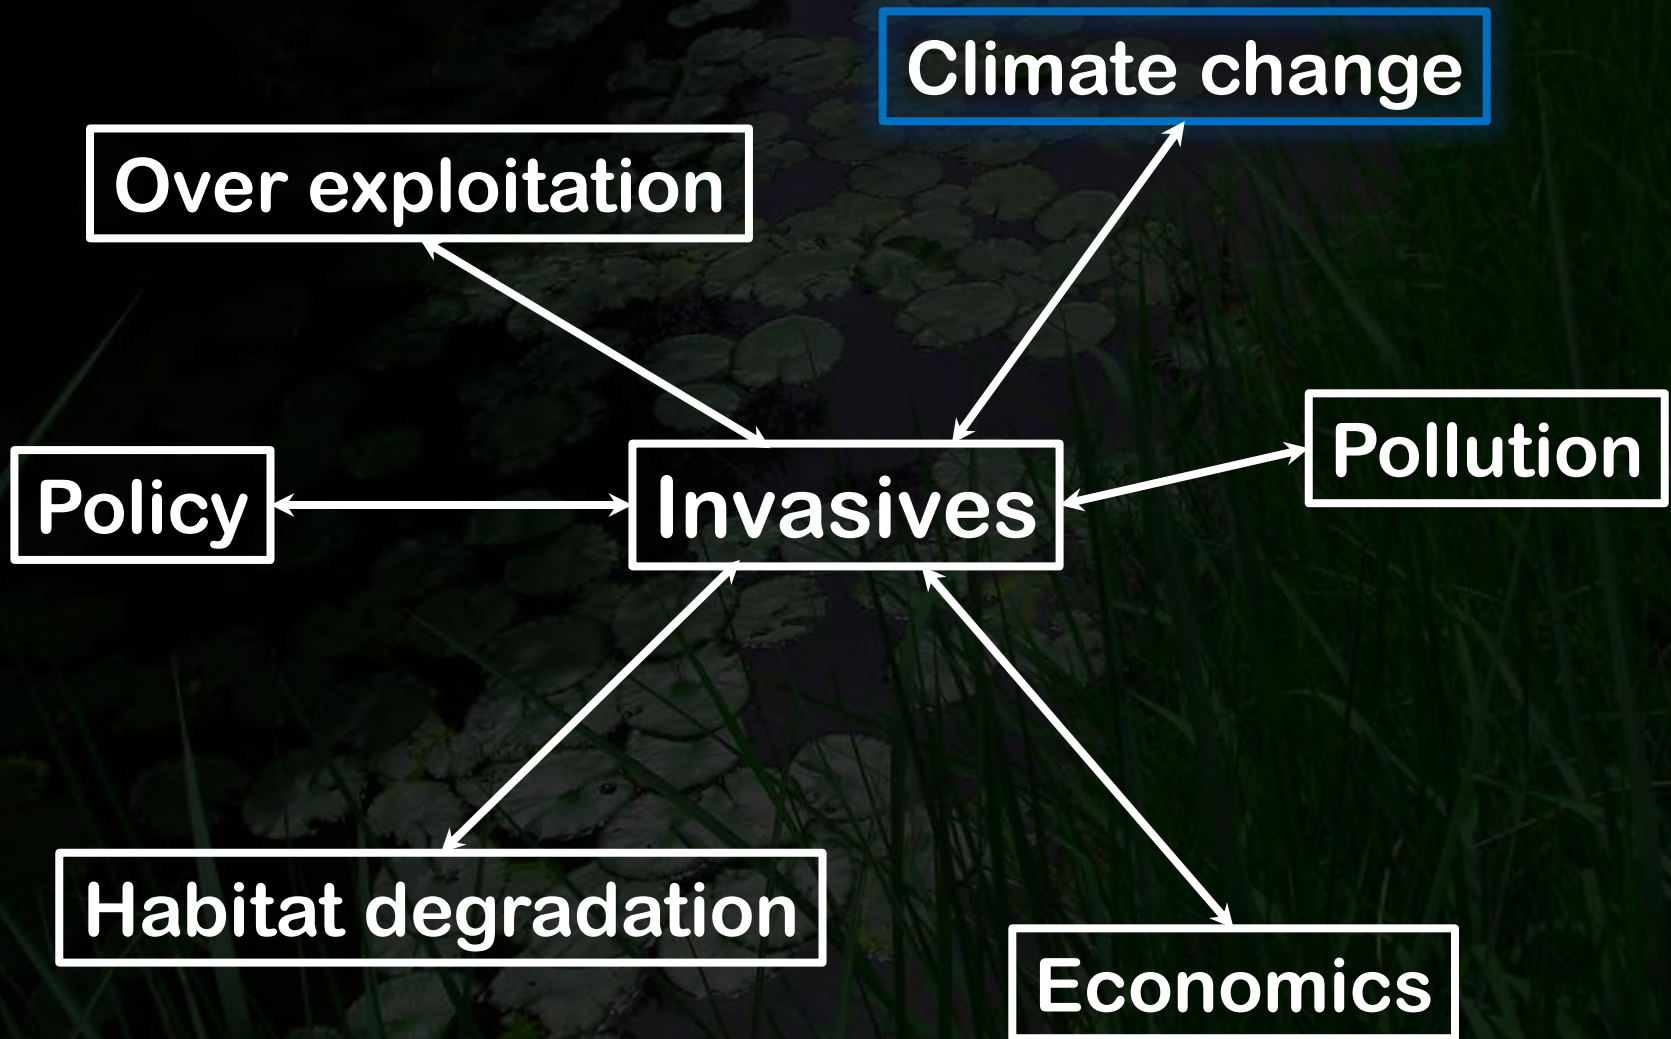

Corvus frugilegus

Wikipedia

A photograph of a pond with numerous lily pads floating on the water. Tall grasses are visible in the foreground and along the right side of the pond. The word "Invasives" is written in white, bold, sans-serif font, enclosed in a white rectangular box with a thin border, centered over the middle of the image.

Pao Srean (2015) PhD Thesis

Experiment

Experiment

Outside pond at University of Hong Kong

Acclimated fish to:

lab conditions – 6 weeks

temperature – 6 weeks

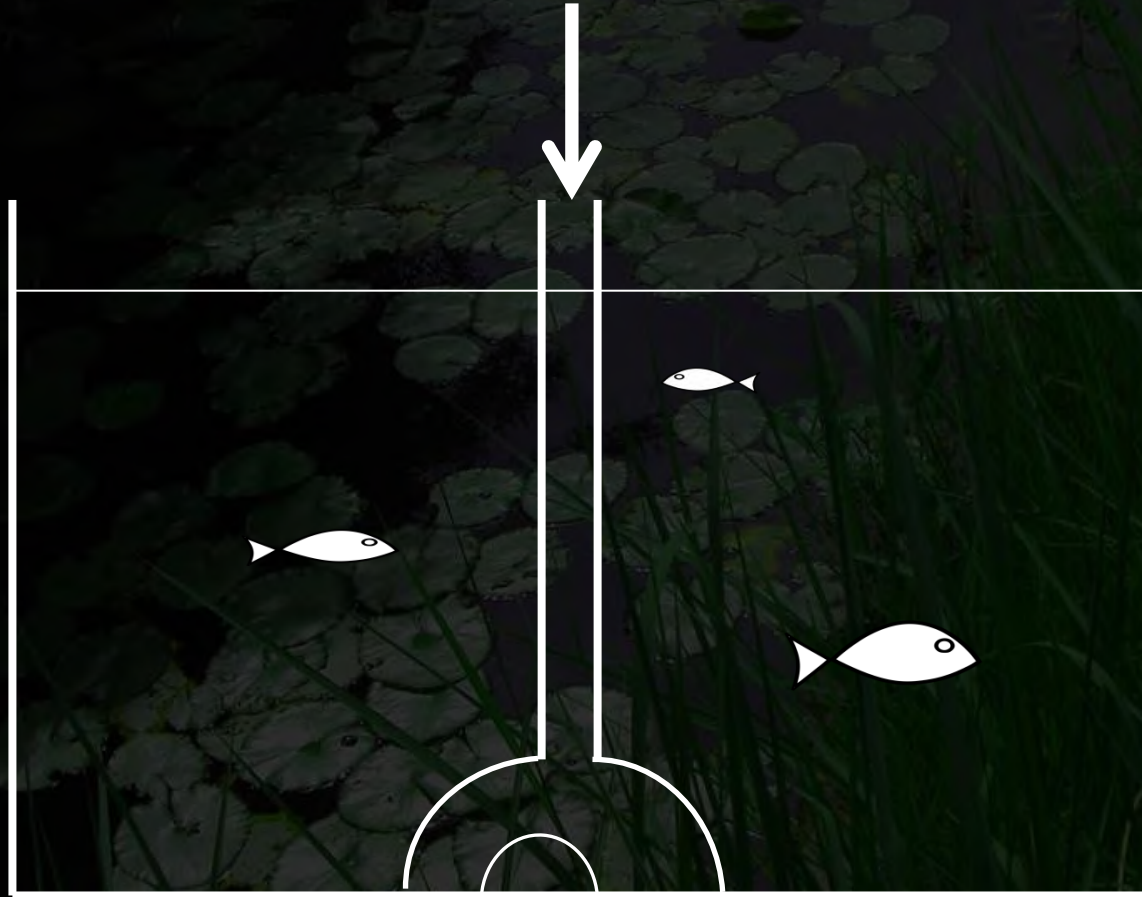

Three temperatures:

Warm - 31°C

Medium - 27°C

Cool - 23°C

Experiment

Experiment

Add fish the evening before

Phase 1: Add novel object (feeding tube)
5 mins observation

Phase 2: Add food (defrosted bloodworms)
5 mins observation

Leave for 30 minutes

Three consecutive days

Measured total length

Experiment

Variables:

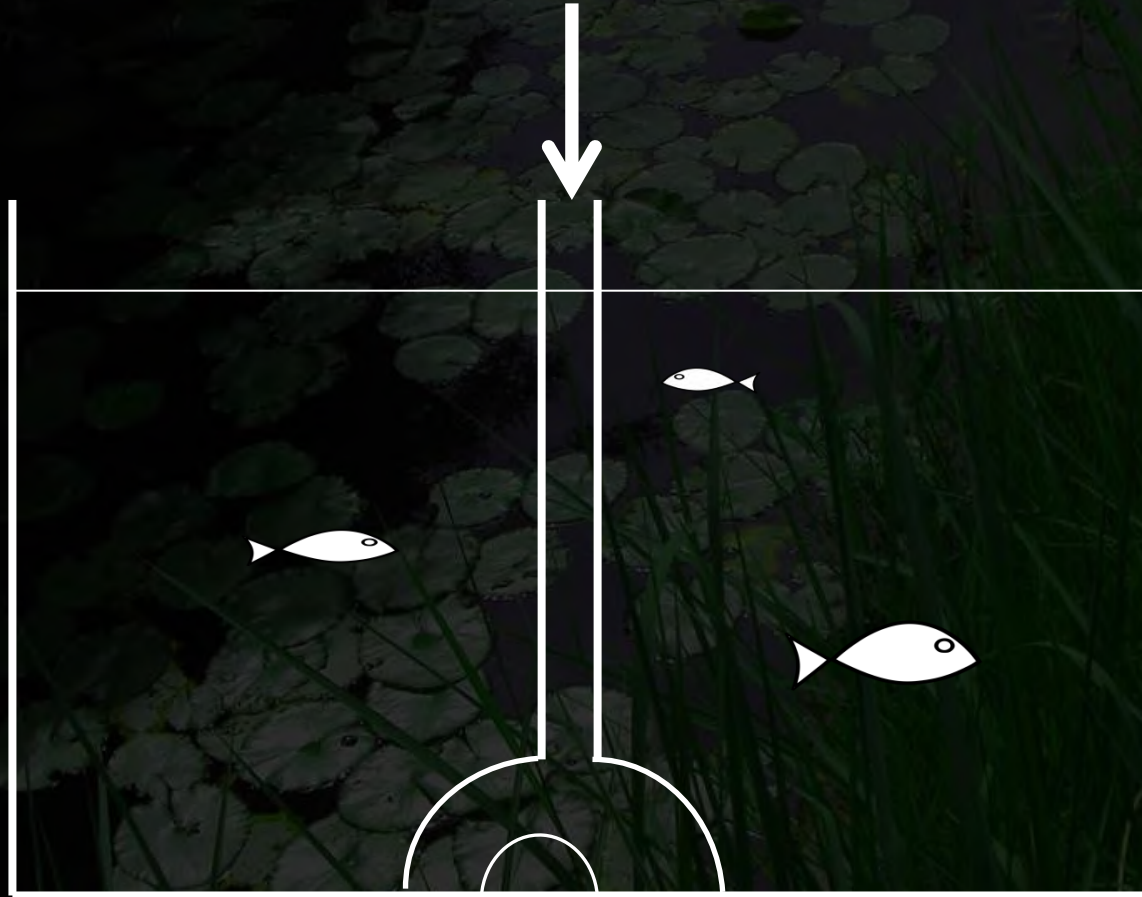

Phase 1: Time to 1st approach

**Phase 2: Time to 1st approach
and time to 1st entry**

Fish sex and size

**Analyses: Generalized Linear Models
Generalized Estimating Equations**

General Results

General Results

Phase 1 – Novel
Approached: 64%

Day 1: 34%

Day 2: 72%

Day 3: 86%

Warm: 57%

Medium: 71%

Cool: 63%

Phase 2 – Food
App & Entered: 37%

Day 1: 25%

Day 2: 39%

Day 3: 48%

Warm: 39%

Medium: 38%

Cool: 35%

Predictions

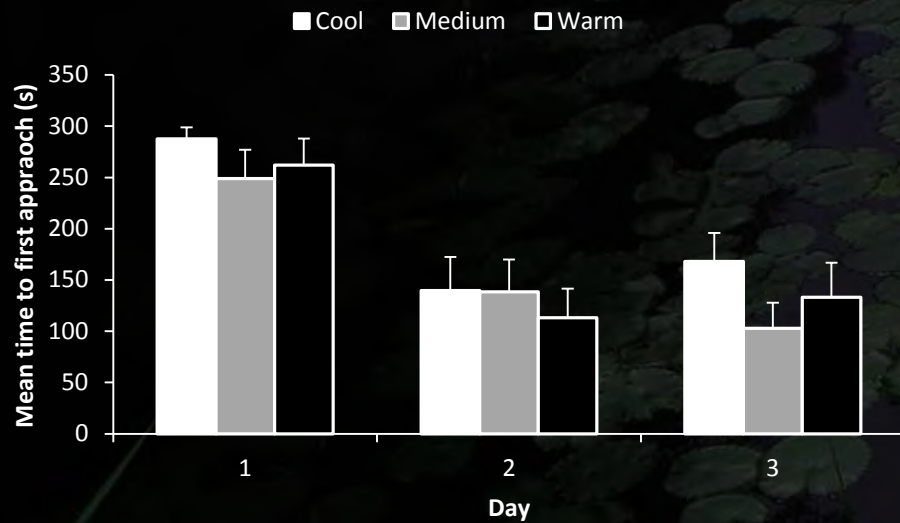

Prediction 1

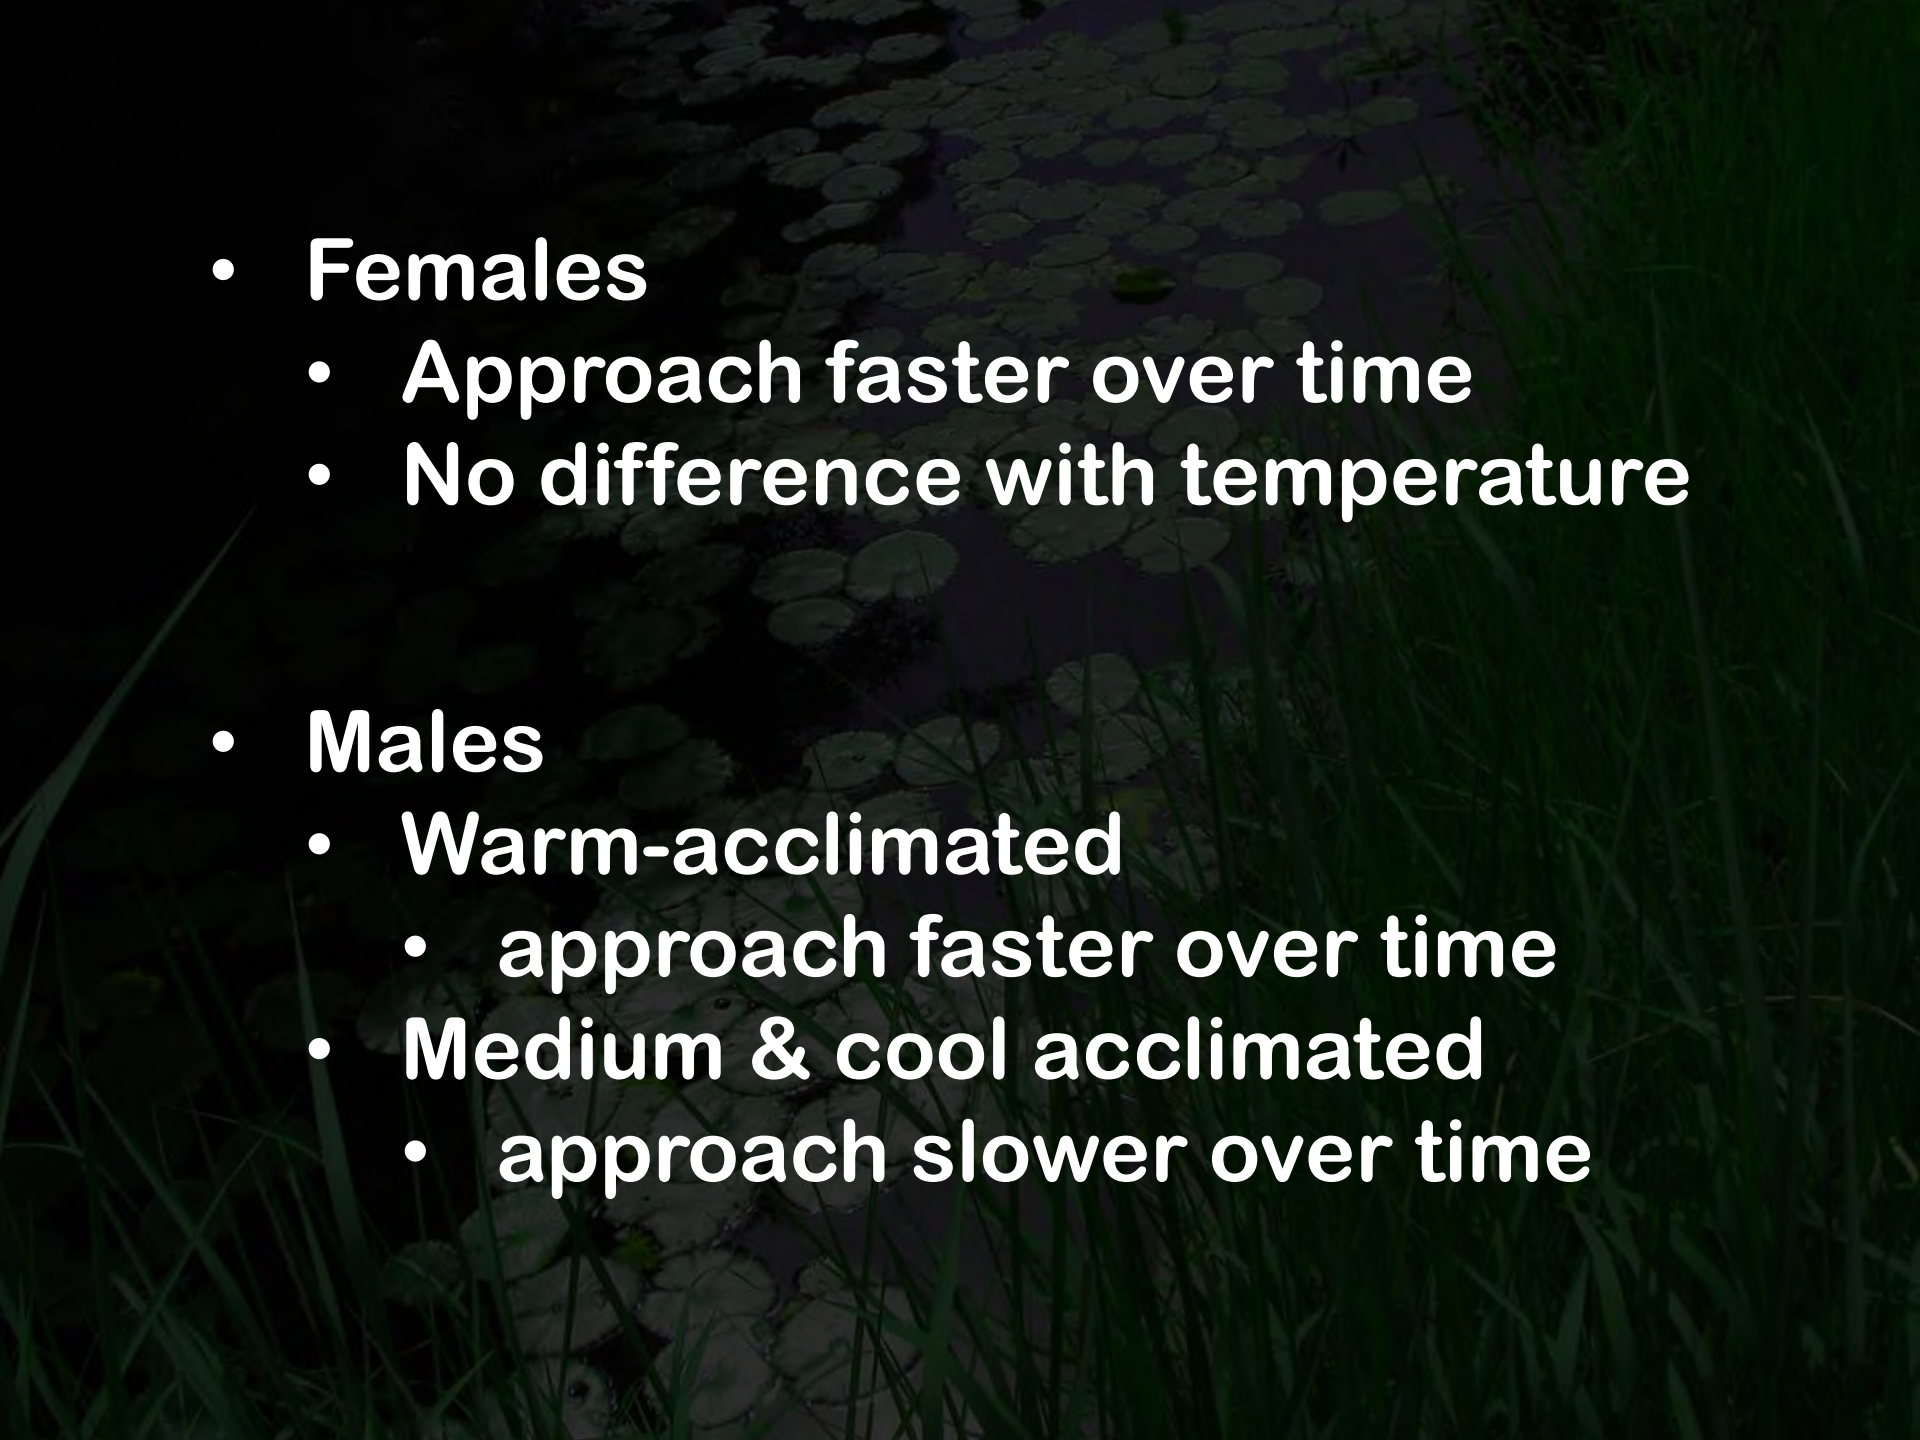

Warm-acclimated mosquitofish

- Approach a novel object faster
- Adjust to a novel object faster
- learning

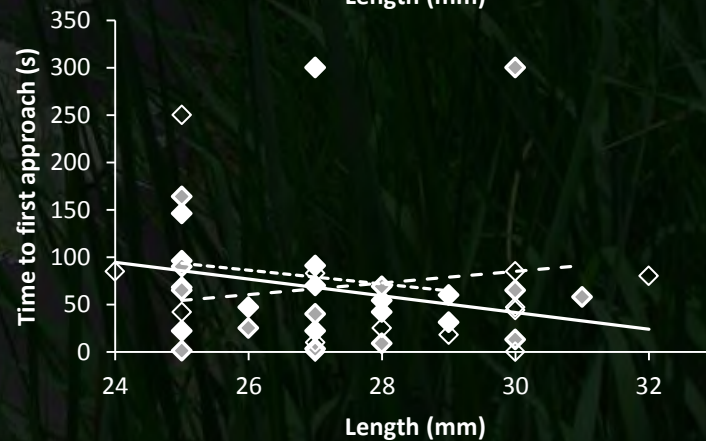

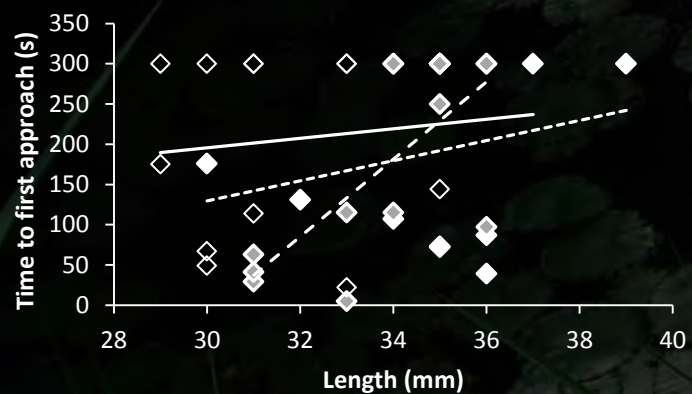

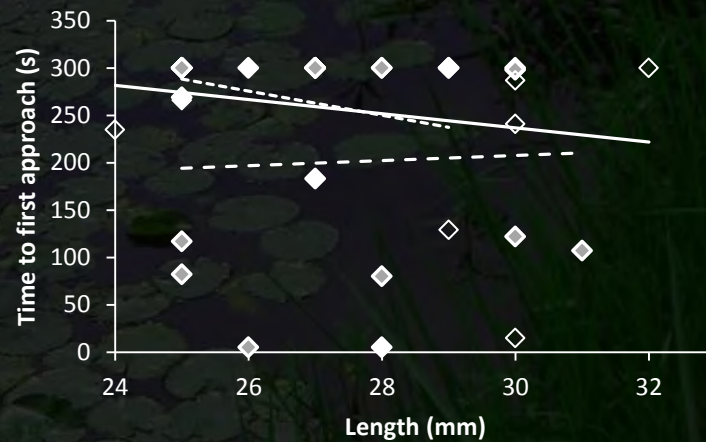

Phase 1 data

Effect	Wald χ^2	df	p
Temp	1.616	2	0.446
Day	65.688	2	<0.001
Sex	17.540	1	<0.001
Temp × Day	2.577	4	0.631
Temp × Sex	1.008	2	0.604
Day × Sex	9.497	2	0.009
Temp × Day × Sex	2.354	4	0.671

- 
- **Females**
 - Approach faster over time
 - No difference with temperature
 - **Males**
 - Warm-acclimated
 - approach faster over time
 - Medium & cool acclimated
 - approach slower over time

	df	Sex			
		Females		Males	
		Wald χ^2	p	Wald χ^2	p
Temp	2	16.309	<0.001	7.181	0.028
Day	2	6.098	0.047	2.928	0.231
Size	1	29.986	<0.001	0.030	0.862
Temp × Day	4	12.213	0.016	11.555	0.021
Temp × Size	2	16.261	<0.001	5.798	0.055
Day × Size	2	4.736	0.094	2.480	0.289
Temp × Day × Size	4	11.094	0.026	11.619	0.020

- **Females**
 - Generally approach faster over time
 - Medium & cool acclimated
 - approach faster with increasing size
 - Warm acclimated
 - no effect of size
- **Males**
 - Generally approach faster over time
 - Warm-acclimated
 - approach faster with increasing size
 - Medium & cool acclimated
 - No effect or approach slower over time

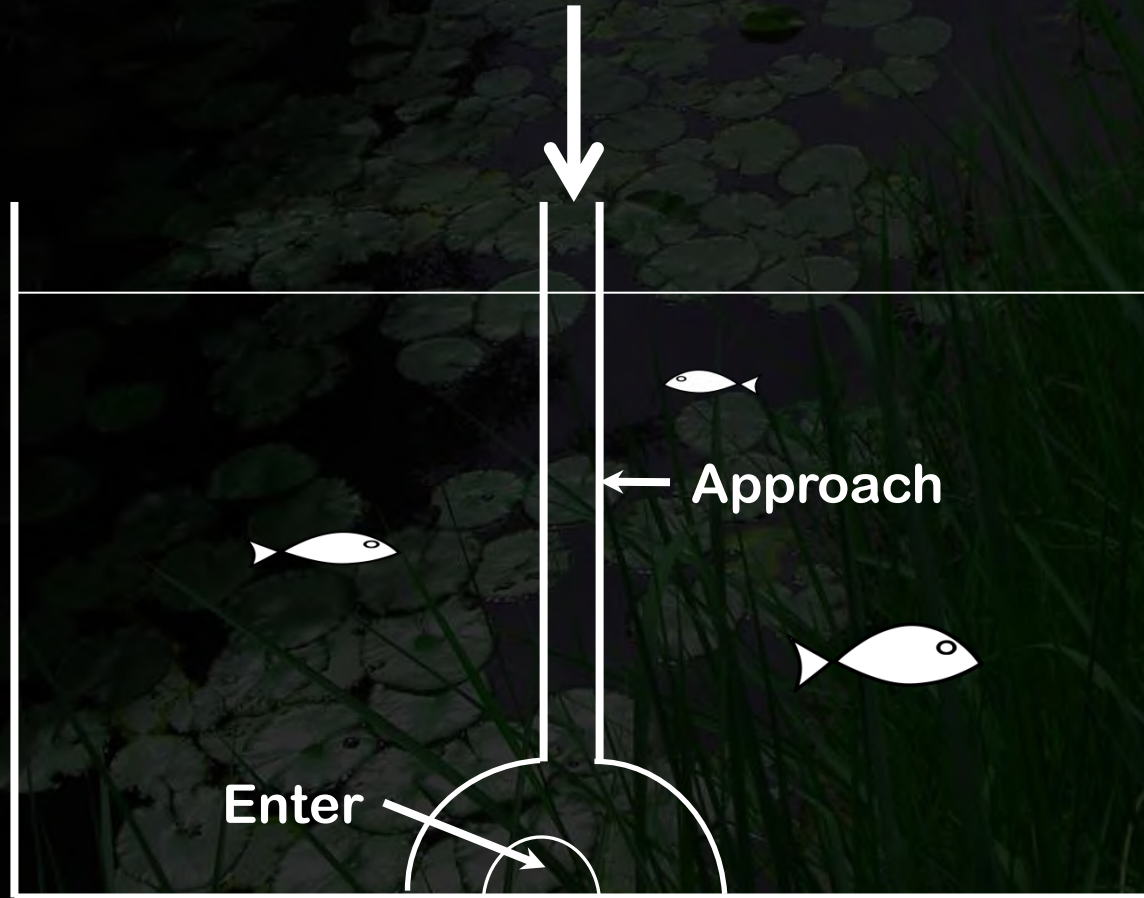

Prediction 2

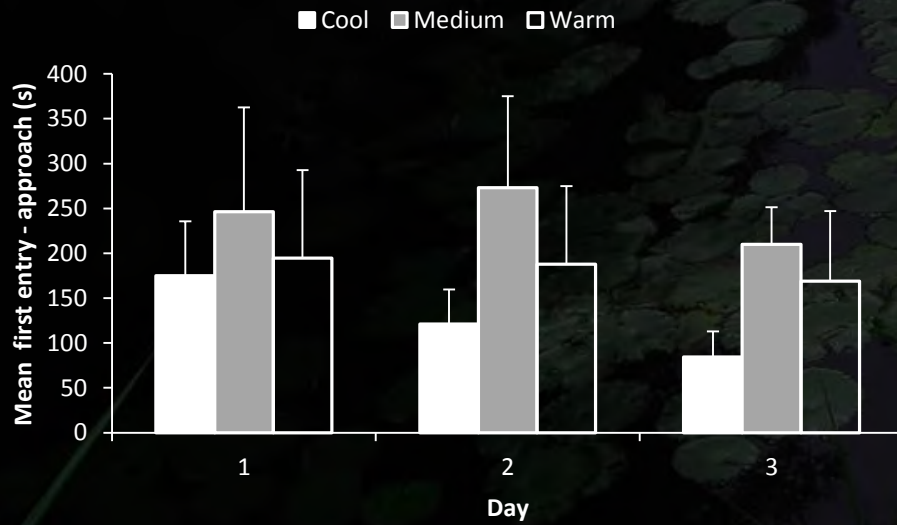

Warm-acclimated mosquitofish

- Learn to find food faster

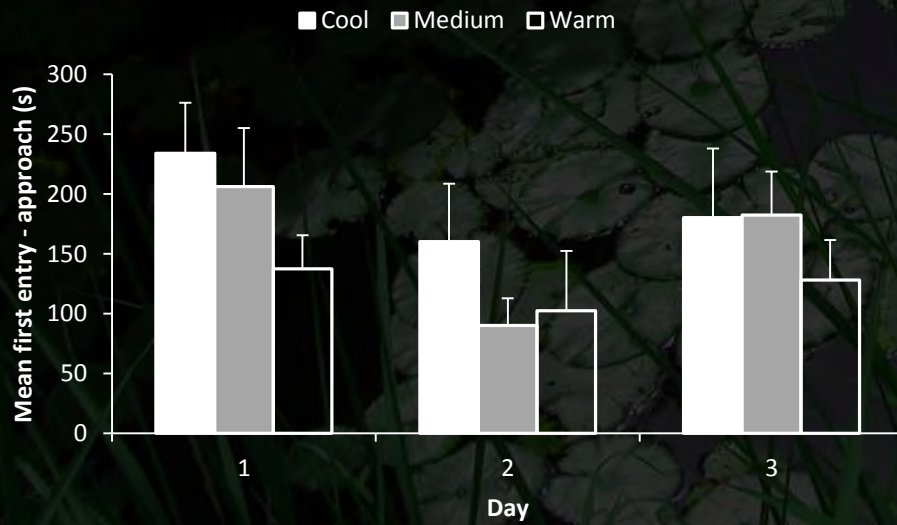

Phase 2 data

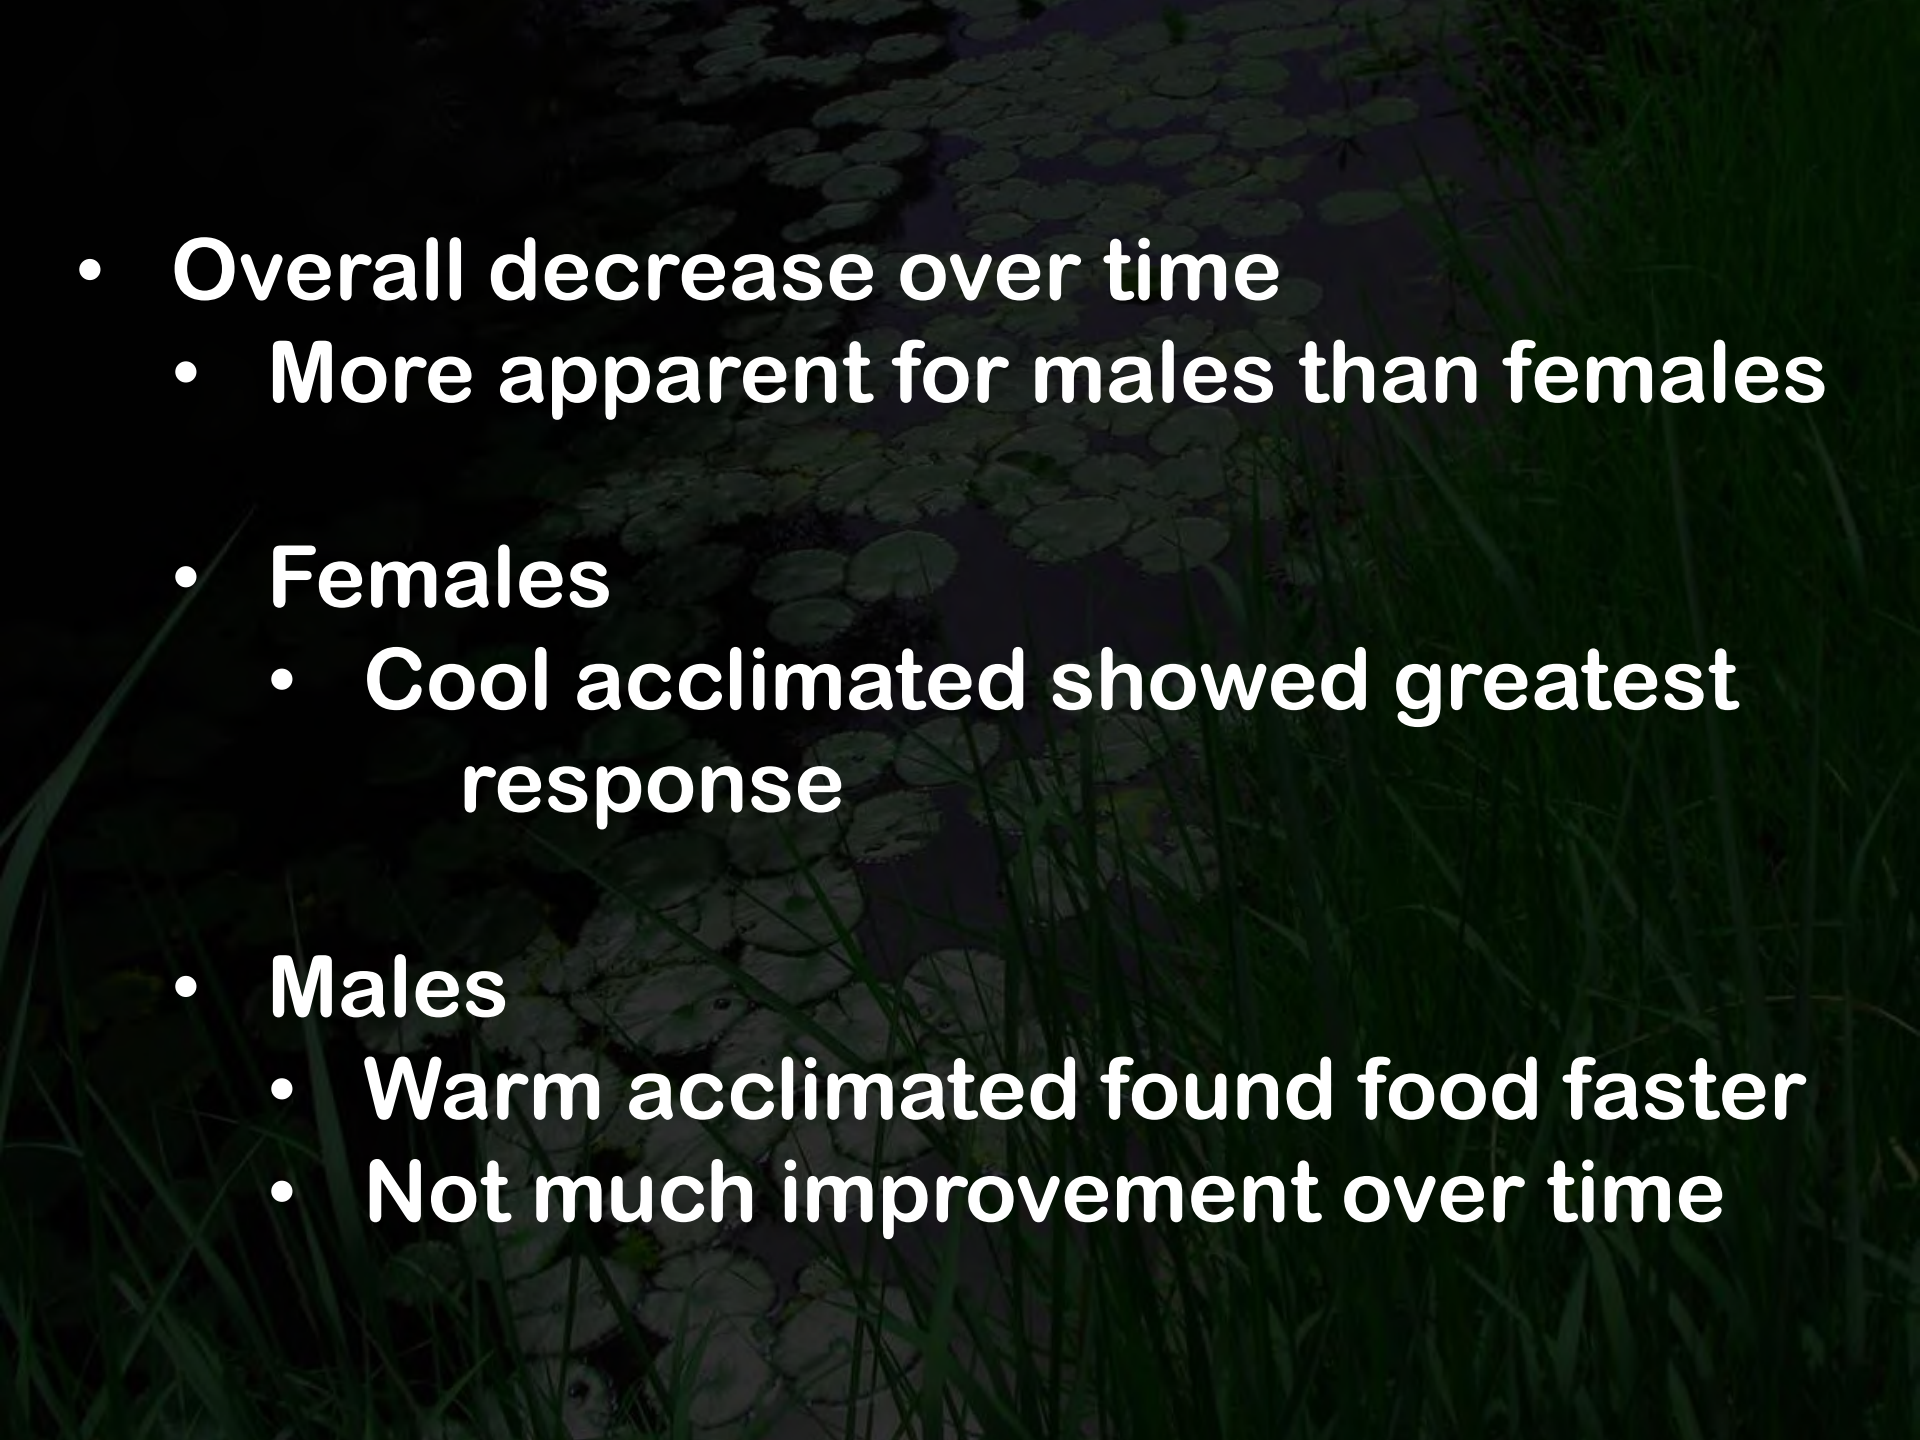

Variable = (Enter – Approach)

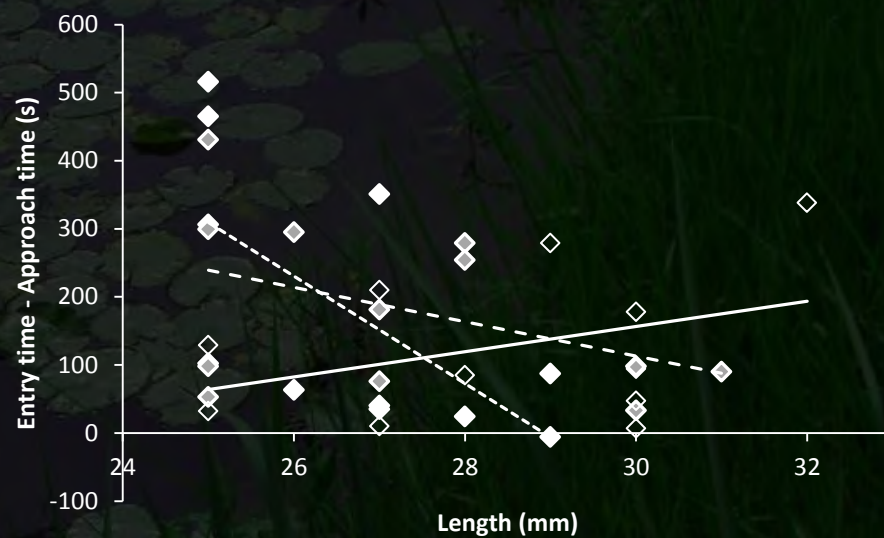

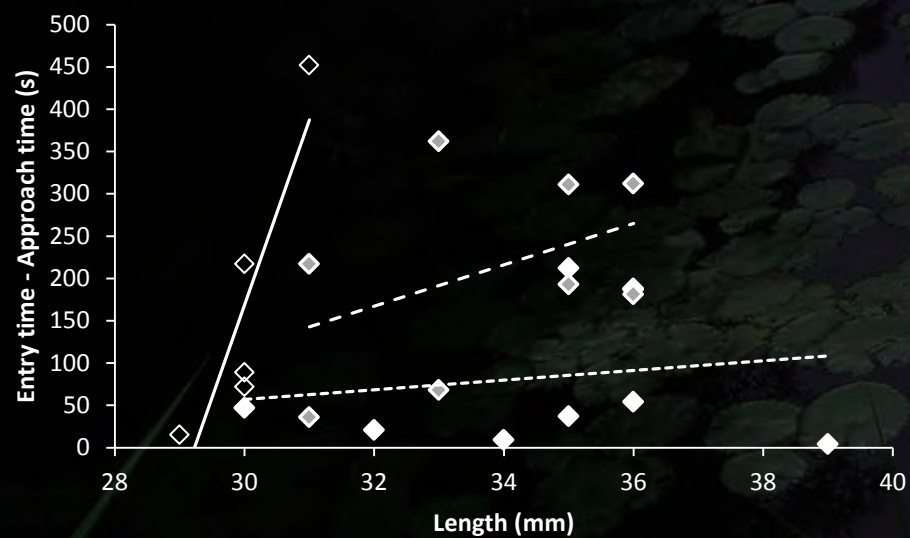

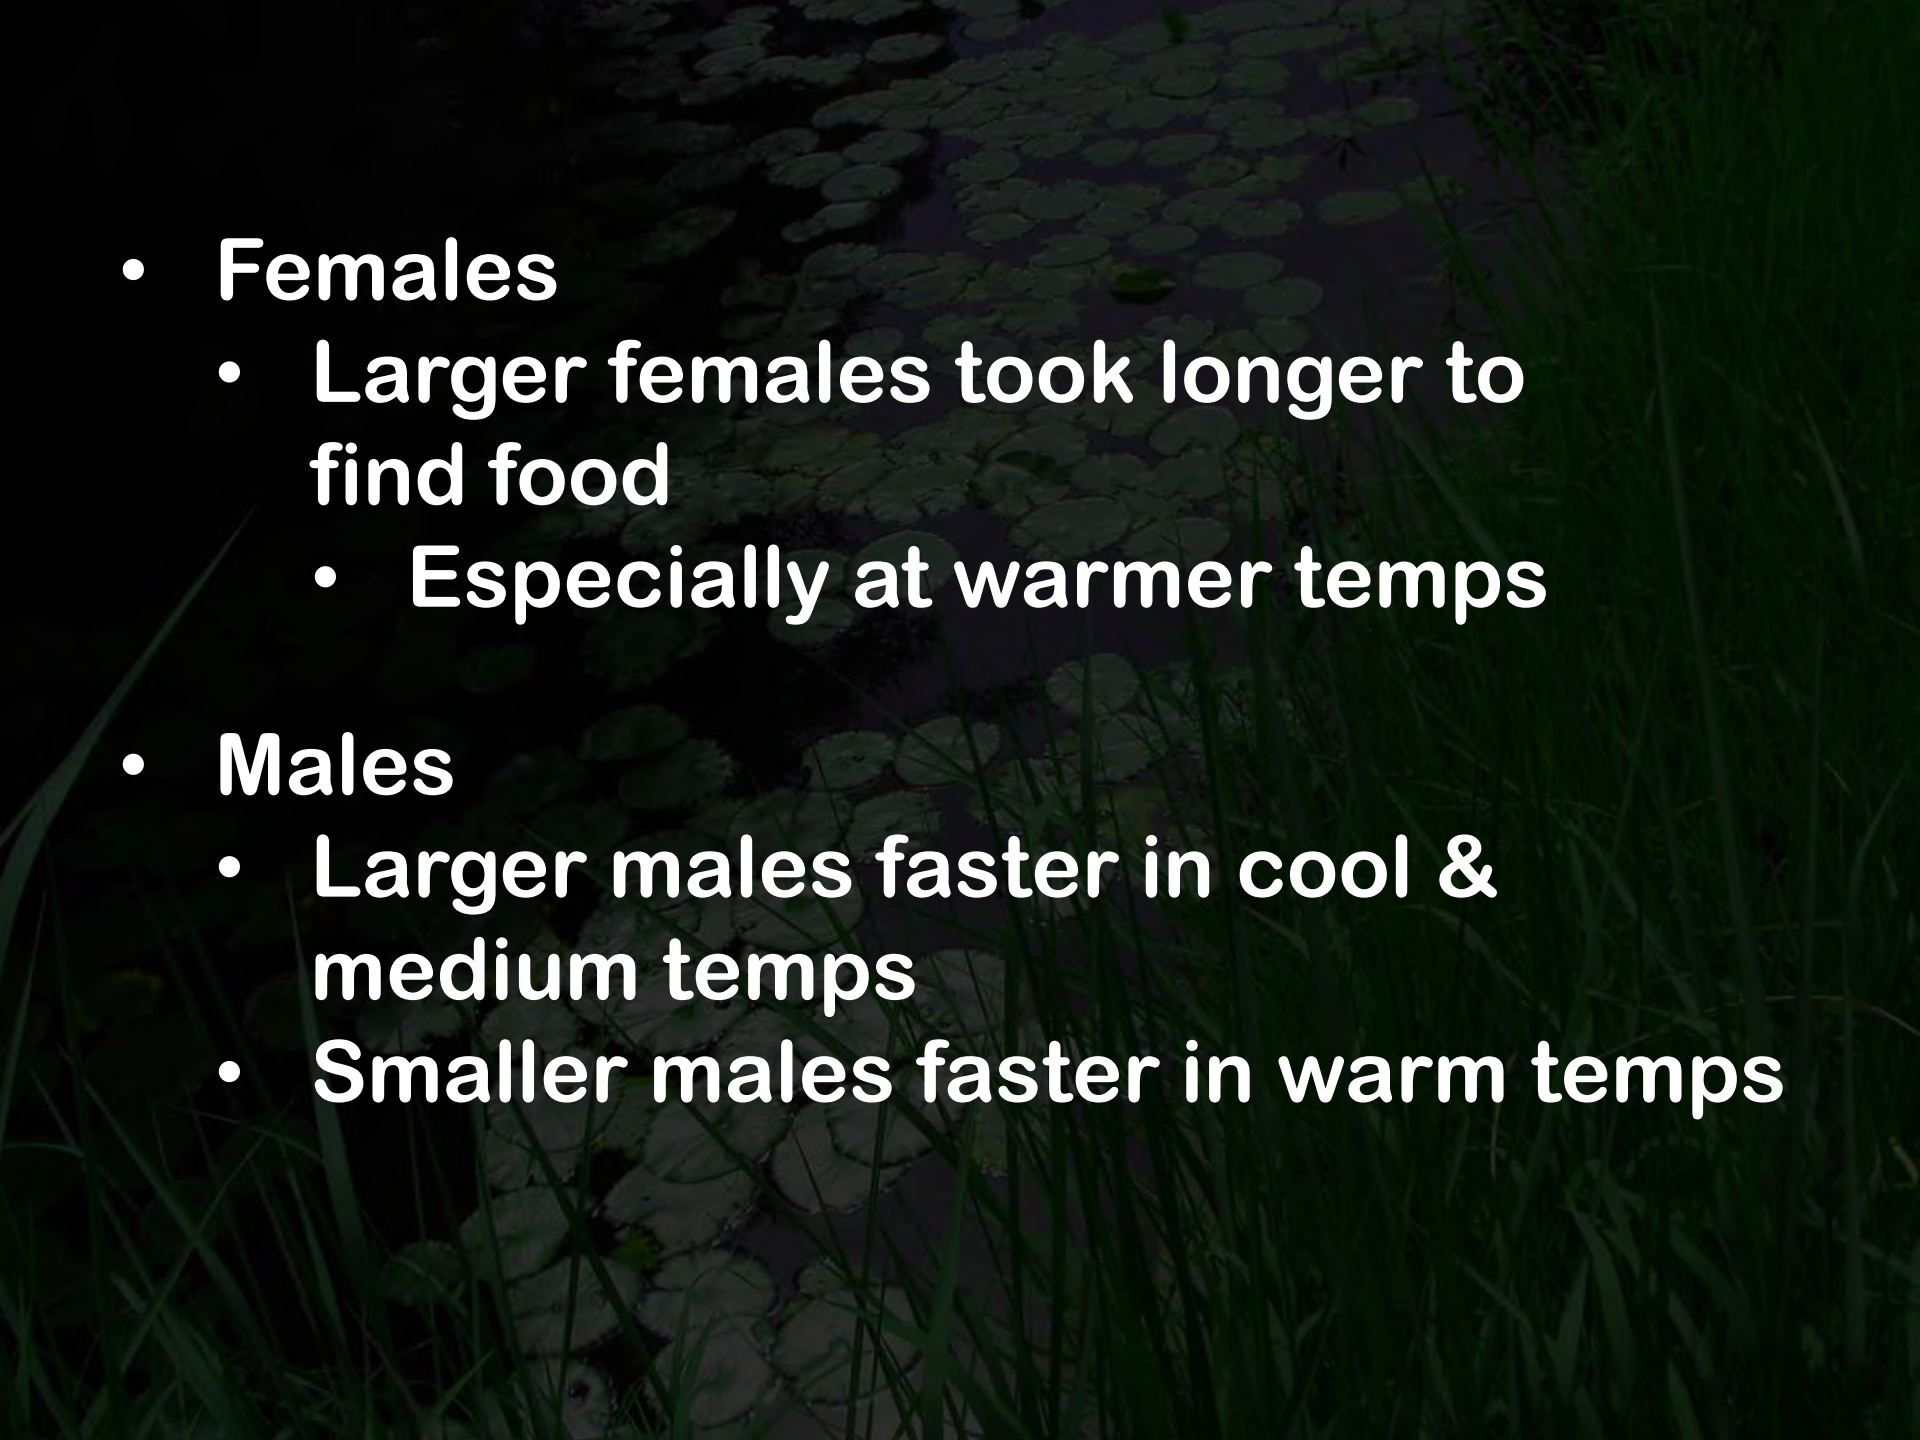

Effect	df	Wald χ^2	p
Temp	2	2.193	0.334
Day	2	3.122	0.210
Sex	1	1.585	0.208
Temp \times Day	4	0.321	0.988
Temp \times Sex	2	10.755	0.005
Day \times Sex	2	3.936	0.140
Temp \times Day \times Sex	4	2.446	0.654

- 
- Overall decrease over time
 - More apparent for males than females
 - Females
 - Cool acclimated showed greatest response
 - Males
 - Warm acclimated found food faster
 - Not much improvement over time

Effect	df	Females		Males	
		Wald χ^2	p	Wald χ^2	p
Temp	2	11.478	0.003	11.974	0.003
Size	1	15.323	<0.001	6.737	0.009
Temp \times Size	2	12.275	0.002	11.819	0.003

- 
- **Females**
 - Larger females took longer to find food
 - Especially at warmer temps
 - **Males**
 - Larger males faster in cool & medium temps
 - Smaller males faster in warm temps

Conclusions

Overall warm acclimated fish performed better

But patterns influenced by sex and size

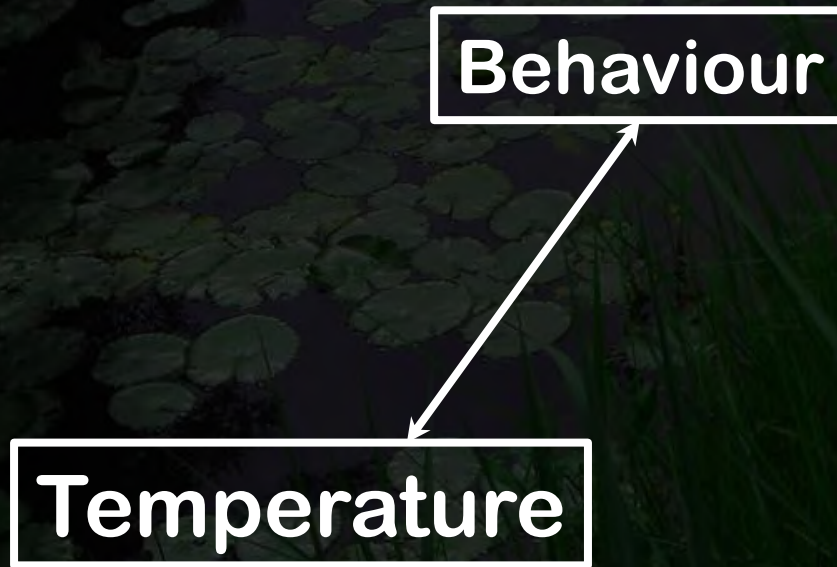

Remarkably rapid learning

Questions

**Will increased learning ability enhance
invasive success or impacts?**

The background is a dark, moody photograph of a pond. The water is dark, and the surface is covered with numerous lily pads of varying sizes. Tall, thin grasses or reeds are visible in the foreground and along the right side, their blades catching some light. The overall tone is very dark, with the text providing a sharp contrast.

Thanks
